

RS232C-Compatible Controller SC8800/SC8800E for Stepping Motor Systems

The **SC8800** and **SC8800E** controllers can be programmed from a computer or ASCII terminal via a standard RS-232C port.

Features

● Easy-to-Use

- The instruction set software is built into the controller. There is no need for set-up diskettes.
- Can be pre-programmed prior to installation.
- An easy-to-learn instruction set allows for complete system operation.
- End-of-travel and home positions can be easily determined by the three dedicated limit switch inputs.
- Operates on 10 to 28 VDC so the controller can be powered by a standard power supply.

● Programming Options

- Can be controlled or programmed directly from a computer or ASCII terminal via a standard RS-232C port.
- Can be controlled by industry-standard programmable logic controllers so it can run off any already existing PLC.
- Linear, S-curve and parabolic acceleration/deceleration profiles are available.

● Flexible I/O

- There are four programmable inputs and two programmable outputs to give the controller the ability to control other functions within the machine. All inputs and outputs are optically isolated.
- Step and direction signal outputs are industry standard TTL level signals in either 1-pulse or 2-pulse modes so the **SC8800** and the **SC8800E** can be used with any industry-standard stepping motor and driver package.
- All I/Os can be driven by an external DC power supply of 5 to 24 VDC.

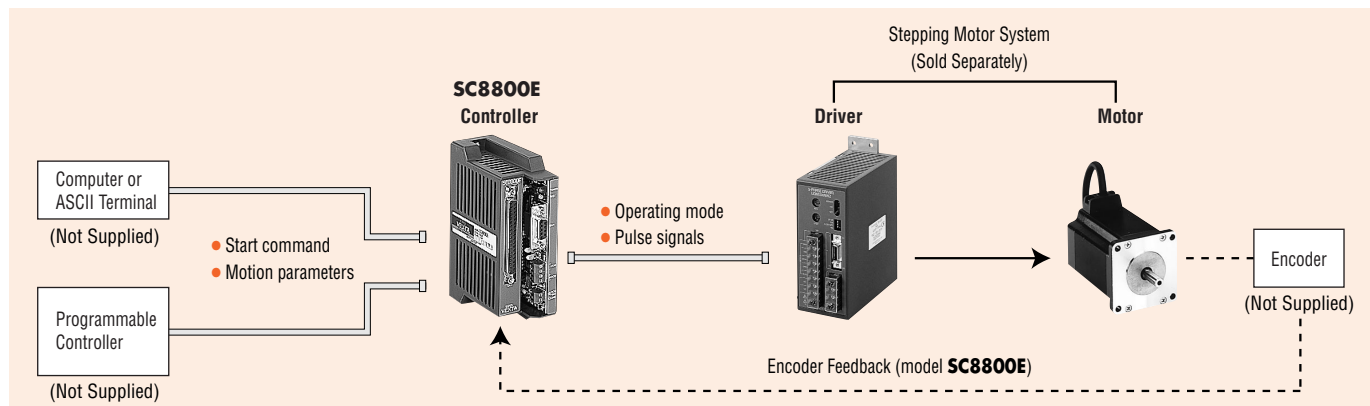

● Encoder Feedback Capabilities (Model **SC8800E**)

- Nearly every known feedback device can be recognized since the controller can use two or three channels in either single-ended or differential modes.

Daisy-Chain Capabilities

- Up to 35 different axes can be controlled from one computer or ASCII terminal by daisy-chaining up to 35 **SC8800** or **SC8800E** controllers together.
- Available with an optional encoder input for position verification (model **SC8800E**).

System Configuration

Specifications

Parameter		Value
Input Power		10~28 VDC, 3.0 watts max.
Performance	Stepping Accuracy	±0 steps from preset total
	Velocity Accuracy	±0.05% of preset rate
	Velocity Repeatability	±0.01% of max. rate
	Position Range	0 to ±999,999,999 steps, when DSCALE is active
	Velocity Range	1 to 800,000 steps/sec
	Acceleration Rate	0.001 to 10 sec
Motion Types	Absolute	Move to specified internal counter position
	Index	Move specified distance
	Continuous	Move at specified speed until commanded to stop
	Go Home	Move to Home limit switch
	Move Time	Move specified distance in specified time
Sequence Execution	Via RS-232C	Sequence may be executed from RS-232C interface with the RUN command
	Via Power-up Auto Run	Execute any sequence, 0~15 upon power-up
	Via Programmable Input	Sequences may be selected using an external device
Programming Language		Simple, high-level programming language
Non-Volatile Memory	Sequence Length	8k or up to available remaining memory
	Number of Programs	50 max. or up to available memory
Inputs	Command Interface	Type Parameters Configuration
	CW, CCW and Home Limits	+5 to +30 VDC, Optically Isolated
	Programmable Inputs	Four to be used for machine interaction and/or sequence selection, +5 to +30 VDC, Optically Isolated
	TIM	Phase zero indicator, +5 to +30 VDC, Optically Isolated
	Encoder	Model SC8800E accepts 2 or 3 channel, 2-phase quadrature incremental encoders with differential or single ended outputs, 5 VDC TTL compatible, 400 kHz (quadrature), max.
Outputs	Step and Direction	TTL, High: 4~5 VDC, Low: 0~0.5 VDC, Pulse width: 0.5 ms min., Rise/Fall time: 0.2 ms max.
	Programmable	Two, Open collector, 1~24 VDC, 80 mA max.
	Status	Fault & Busy, Open collector, 1~24 VDC, 80 mA max.
Mechanical	Dimensions	L 3.35 in. (85 mm) × W 1.57 in. (40 mm) × H 4.72 in. (120 mm)
	I/O Connectors	Combination of fixed screw terminal and D-type
Environmental	Cooling Method	Natural Ventilation
	Ambient Temperature Range	32°F~122°F (0°C~+50°C)
	Humidity	20~ 85% (noncondensing)
Weight		0.68 lb. (0.31 kg)

Programming Example

The two moves shown above can be executed with the following program commands :

Commands	Description
1 LOOP 10	Loop this program 10 times
2 SAS Push START to begin	Echo message to screen
3 VS700; V1500	Set start and run velocities for the first move
4 TA1; TD1.5	Set Accel time to 1 sec & Decel time to 1.5 sec
When start signal is input, program begins	
5 PC0; EC0	Set position and encoder counters to zero
6 H+	Set direction to CW
7 D6500	Set distance to 6500 steps
8 MI	Execute the Index move
9 DELAY1	Delay 1 second
10 IF (CPI=0)	If encoder position is incorrect,
11 THEN JMP1	Then, restart program
12 ELSE DELAY3	Else Delay 3 seconds.
13 OUT=101	Turn on Outputs 1 and 3
14 V2000	Set velocity to 2000 steps/sec
15 T4	Set Accel & Decel time to 4 sec. for second move
16 WHILE (IN1=0)	While Input #1 is off,
17 MC	Move continuously
18 ENDW	End the while loop
19 V2500; MC	Change speed to 2500 steps/sec
20 DELAY5	Delay 5 seconds
21 V1200	Change speed to 1200 step/sec
22 DELAY2	Delay 2 seconds
23 STOP	Stop moving
24 ENDL	Return to beginning of loop

Dimensions Scale 1/4, Unit = inch (mm)
