Thank you for purchasing an Oriental Motor product.
This Manual describes product handling procedures and safety precautions.

- Please read it thoroughly to ensure safe operation.
- Always keep the manual where it is readily available.

1 Safety precautions

The precautions described below are intended to prevent danger or injury to the user and other personnel through safe, correct use of the product. Use the product only after carefully reading and fully understanding these instructions. Also read the “Safety precautions” sections in the operating manuals that came with the product you are combining with the OPX-2A.

| WARNING | Handling the product without observing the instructions that accompany a “Warning” symbol may result in serious injury or death. |
| CAUTION | Handling the product without observing the instructions that accompany a “Caution” symbol may result in injury or property damage. |
| Note | The items under this heading contain important handling instructions that the user should observe to ensure safe use of the product. |

**WARNING**

**General**
- Do not use the product in explosive or corrosive environments, in the presence of flammable gases, locations subjected to splashing water, or near combustibles. Doing so may result in fire, electric shock or injury.
- Assign qualified personnel the task of installing, wiring, operating/controlling, inspecting and troubleshooting the product. Failure to do so may result in fire, electric shock or injury.
- When the protective function is triggered, first stop operation and turn off the power, then turn on the power again after removing the cause. Continuing the operation without removing the cause of the problem may cause malfunction of the motor, leading to injury or damage to equipment.

**Repair, disassembly and modification**
- Do not disassemble or modify the data setter. This may cause electric shock or injury. Refer all such internal inspections and repairs to the branch or sales office from which you purchased the product.

**CAUTION**

**General**
- Do not use the motor beyond the specifications. Doing so may result in electric shock, injury or damage to equipment.

**Operation**
- Provide an emergency stop device or emergency stop circuit external to the equipment so that the entire equipment will operate safely in the event of a system failure or malfunction. Failure to do so may result in injury.

**Disposal**
- Dispose the product correctly in accordance with laws and regulations, or instructions of local governments.
Introduction

Only qualified personnel of electrical and mechanical engineering should work with the product. Use the product correctly after thoroughly reading the “1 Safety precautions” on p.2. In addition, be sure to observe the contents described in warning, caution, and note in this manual. The product described in this manual has been designed and manufactured to be incorporated in general industrial equipment. Do not use for any other purpose. Oriental Motor Co., Ltd. is not responsible for any damage caused through failure to observe this warning.

■ Overview of the product

The OPX-2A is a data setter that lets you set operating data and parameters, perform monitoring, etc. So that the OPX-2A is used correctly and safely, thoroughly read the “PKA Series USER MANUAL” and understand the basic operating procedures and other details of the motor.

■ Features of OPX-2A

The OPX-2A can be used to save data in addition to setting of operation data and parameters. There are four destinations (data banks) to save data.

The OPX-2A can be used for the following purposes:
- Operation data and parameters of the motor can be set.
- The operating status of the motor can be monitored.
- The operation data and parameters set in the motor can be saved to the OPX-2A.
- The operation data and parameters saved in the OPX-2A can be copied to another motor connected to the OPX-2A.

■ Specifications

■ RoHS Directive

The products do not contain the substances exceeding the restriction values of RoHS Directive. (2011/65/EU)
3 Preparation

This chapter explains the items you should know before using the OPX-2A.

3-1 Checking the product

Verify that the items listed below are included. Report any missing or damaged items to the branch or sales office from which you purchased the product.

- Data setter OPX-2A............. 1 unit
- Information.......................... 1 copy

3-2 Names and functions of parts

![Diagram of OPX-2A](image-url)

**Display**
This area shows the motor position, operation data, parameters, alarms, etc.

**LED indicators**
These LED indicators are used to indicate the operation mode of the OPX-2A and the motor status.
- Switches the operation mode.
- Moves to the upper level.
- Stop the motor immediately while being operated in test mode.

Use this button to select data or change the displayed item or move to the next lower level.

Use these buttons to change the selected item or set data and parameters.

Use these buttons to increase or decrease the value or change the selected item.

Use these buttons to navigate through each data or parameter to a desired digit.

**Notation**
In this manual, keys are denoted by symbols, such as ![MODE][SET][↑][↓][←][→].
In figures, a simplified illustration of the display and LED indicators is used, as shown below.
## 3-3 How to read the display

The display consists of 7-segment LEDs. (The number "5" and alphabet "S" are the same.)

- **Numbers**

  1 2 3 4 5 6 7 8 9 0

- **Alphabets**

  A B C D E F G H I J K L
  M N O P Q R S T U V W Y

- **Signs**

  + -

### How to read the LED indicators

When the operation mode is changed or an alarm or warning generates, a corresponding LED will be lit. While the motor is operating or the edit lock function is enabled, the condition is also indicated by the illumination of a corresponding LED.

![LED indicators diagram]

**Lit in the copy mode**
- Lit in the data mode
- Lit in the parameter mode
- Lit in the monitor mode
- Lit when an alarm is present
- Lit when a warning is present
- Lit while the motor is operating

- Lit in the parameter mode
- Lit in the monitor mode
- Lit when an alarm is present
- Lit when a warning is present
- Lit while the motor is operating

**Lit in the parameter mode**
- Lit in the data mode
- Lit in the monitor mode
- Lit when an alarm is present
- Lit when a warning is present
- Lit while the motor is operating

**Lit when the edit lock function is enabled**
- Not used

**Lit in the data mode**
- Not used

**Lit when the edit lock function is enabled**
- Not used

### 3-4 Types of operation modes

The OPX-2A has multiple operation modes, and the operation mode will change every time the [MODE] key is pressed. The display starts in the monitor mode when the power is turned on.

When the operation mode is changed, the LED indicator corresponding to the previous mode will turn off and the one corresponding to the new mode will be lit. Identify the current operation mode based on the LED indicator currently lit.
3-5  Basic operations of the OPX-2A

Use the six keys \([\text{MODE}]\[\text{SET}]\[\uparrow]\[\downarrow]\[\leftarrow]\rightarrow\)] to set data and operate the motor.

- **Operation flow**

The OPX-2A is operated according to the flow shown below.

Level 1: Top screen in each mode

1. Use the \([\text{MODE}]\) key to navigate through the modes.

Level 2: Item selection screen

2. Use the \([\text{SET}]\) key to move to the lower level.

3. Use the keys to select a desired item.

4. To move to the lower level, press the \([\text{SET}]\) key. To return to the previous level, press the \([\text{MODE}]\) key.

As explained above, use the \([\text{SET}]\) key to navigate through the levels and use the \([\uparrow]\[\downarrow]\] keys to select a desired item. This is the basic operation flow.

- **Note**

If the \([\text{SET}]\) key on the OPX-2A is pressed while internal processing is being performed, the top screen will not change to any of its sub-screens and ‘mEm-bUSy’ will be shown on the display. Be sure to wait until all internal processing is completed, before pressing the \([\text{SET}]\) key.
How to input values

As an example, how to change “+30” to “−100” is explained.

Basic operations
- Use the [↑][↓] keys to increase/decrease the value or change the sign.
- Use the [←][→] keys to move to the digit you want to edit.
- If positive and negative values are differentiated, each value is preceded by a sign.
- You can edit the digit currently blinking.

1. First, change the 10's place from "3" to "0."
   Press the [←] key once to move to the 10's digit you want to edit.

2. Press the [↓] key three times to change the value to "0."

3. Next, change the 100's place from "0" to "1."
   Press the [←] key once to move to the 100's digit you want to edit.

4. Press the [↑] key once to change the value to "1."

5. Next, change the sign.
   Press the [←] key once to move to the sign digit you want to edit.

6. Press the [↑] or [↓] key once to change the sign to "−."

7. After all digits have been changed, press the [SET] key to confirm the value.
   All digits comprising the value blink for approx. 2 seconds.

Note
If the value you have input is outside the setting range, "Error" will be displayed for 1 second.
If this error display appears, input a different value that falls within the setting range.

3-6 Edit lock function

Enable the edit lock function if you want to prevent operation data and parameters from being edited or cleared.
Operation data and parameters cannot be changed or deleted while the edit lock function is enabled.

Setting the edit lock function
In the top screen of each operation mode, press the [MODE] key for at least 5 seconds. The display will show "LocK" and the edit lock function will be enabled.
The "LOCK" LED in the LED indicator area will also be lit.

Canceling the edit lock function
Again in the top screen of each operation mode, press the [MODE] key for at least 5 seconds. The display will show "UnLocK" and the edit lock function will be cancelled.
The "LOCK" LED in the LED indicator area will turn off.

3-7 Rewriting the motor's non-volatile memory

Operation data and parameters are saved to the motor's non-volatile memory. The non-volatile memory can be rewritten approximately 100,000 times. The non-volatile memory will be rewritten after one of the following operations is performed:
- Edit any operation data or parameter
- Download data from the OPX-2A to the motor
- Initialize motor operation data and parameters
4 Installation and connection of the OPX-2A

4-1 Location for installation

The OPX-2A is designed and manufactured to be incorporated in equipment. Install it in a well-ventilated location that provides easy access for inspection. The location must also satisfy the following conditions:

- Inside an enclosure that is installed indoors (provide vent holes)
- Operating ambient temperature 0 to +40 °C (+32 to +104 °F) (non-freezing)
- Operating ambient humidity 85% or less (no condensation)
- Area that is free of explosive atmosphere or toxic gas (such as sulfuric gas) or liquid
- Area not exposed to direct sun
- Area free of excessive amount of dust, iron particles or the like
- Area not subject to splashing water (rain, water droplets), oil (oil droplets) or other liquids
- Area free of excessive salt
- Area not subject to continuous vibration or excessive shocks
- Area free of excessive electromagnetic noise (from welders, power machinery, etc.)
- Area free of radioactive materials, magnetic fields or vacuum
- 1000 m (3300 ft.) or less above sea level

4-2 Installation method

Using a metal plate of 1 to 3 mm (0.04 to 0.12 in.) in thickness, insert the OPX-2A into the mounting hole from the front side and securely set the OPX-2A in place.

- Dimension of mounting hole [mm (in.)]

Removing method

Press all of the four hooks provided on top and bottom of the OPX-2A. In this condition, press the OPX-2A forward to release.
4-3 Connecting to the motor

1. Connect the OPX-2A cable and accessory data setter cable CC001IF-CA (sold separately).
2. Turn on the motor power after connecting the data setter cable CC001IF-CA to the data edit connector (CN4) on the motor.

![Diagram of connecting OPX-2A and motor](image)

**Note**
- When operation data and parameters are set on the OPX-2A, they will be stored in the motor. Once stored in the motor, the data will not be cleared even after the OPX-2A is disconnected from the motor.
- Turning on the power to the motor will also turn on the power to the OPX-2A. Turning off the motor power will turn off the OPX-2A power.
- Turn off the motor power before connecting or disconnecting the OPX-2A cable.

4-4 Error display on OPX-2A screen

The following error message is displayed on the OPX-2A screen.

<table>
<thead>
<tr>
<th>Error display</th>
<th>Description</th>
<th>Remedial action</th>
</tr>
</thead>
</table>
| ![Error Icon](image) | A communication error occurred between the OPX-2A and motor. | - Check if the OPX-2A is connected securely.  
- Check if the cables connecting the OPX-2A are disconnected or damaged.  
- The OPX-2A or the communication part of the motor may have damaged. Contact your nearest Oriental Motor sales office. |
There are the following restrictions while the edit lock function is effective.

- **Data mode, parameter mode:** Although they are displayed on the screen, they are unable to operate.
- **Clearing the alarm and warning records, clear data, position preset, teaching, copy mode:** They are not displayed on the screen.

If the HMI input is in an OFF state, functions other than monitor mode, upload, or verification cannot be executed.

Monitor mode

6 Monitor mode

6-1 Overview of the monitor mode

- Monitoring the operating status
  You can monitor the motor speed, command position, operation data number corresponding to the current operation, and operation data number currently selected in real time.

  A range capable to monitor with the OPX-2A is from \(-19,999,999\) to \(19,999,999\) with up to eight digit numbers. However, only seven digit numbers can be shown on the display of the OPX-2A, so only the last seven digit numbers are shown when the monitored value is eight digit numbers, and a dot is marked on the lower right of the display.

  **Display example**

<table>
<thead>
<tr>
<th>Actual value</th>
<th>Displayed value</th>
</tr>
</thead>
<tbody>
<tr>
<td>(-19,999,999)</td>
<td>(-9999999.)</td>

</tbody>
</table>

- Checking alarms/warnings, clearing alarm/warning records, and resetting alarms
  - If an alarm or warning generates, a corresponding alarm code or warning code will be displayed. You can check the code to identify the details of the alarm/warning.
  - Up to ten most recent alarms/warnings can be displayed, starting from the latest one.
  - You can reset the alarms currently present.
  - You can clear alarm and warning records.

- Checking I/O signals
  You can check the ON/OFF status of each I/O signal of the motor.

6-2 Operation in the monitor mode

1. Use the [MODE] key to select the monitor mode.
2. Press the [SET] key in the top screen of the monitor mode.
3. Use the [↑][↓] keys to select the item you want to monitor.
6-3 Monitor items

- **Motor speed**
  You can check the motor rotation speed (unit: Hz).
  While the motor is rotating in the CCW direction, “−” is shown in front of the displayed value. If the speed is indicated by an absolute value, no sign is shown to indicate the rotation direction. You can select the value display format using the “display mode of the data setter speed” parameter [ID: 480].

- **Command position**
  You can check the command position of the motor with reference to the home position.
  If a resolution is set, an appropriate value based on the resolution is shown as steps.

- **Operation number**
  You can check the operation data number corresponding to the data used in the current positioning operation.

- **Selected number**
  You can check the operation data number currently selected.

- **Alarm**
  When an alarm generates, a corresponding alarm code will be displayed.
  You can also reset alarms or check and clear alarm records.

*If operations are limited by the edit lock function, the screen text in gray is not shown.

**Note**
- Do not turn off the motor power while an alarm is being reset or alarm records are being cleared (while the display is blinking). Doing so may damage the data.
- If operations are limited by the edit lock function, the alarm records cannot be cleared.
- Some alarms cannot be reset on the OPX-2A. Refer to “Alarm code list” on p.18 for details. To reset these alarms, you must cycle the motor power.

- **How to reset an alarm**

  1. While an alarm is displayed, press the [SET] key to move to the lower level.
  2. Press the [↑] key to select the alarm reset screen.
  3. Press the [SET] key.

  The alarm is reset.

- **How to check an alarm record**

  You can check up to ten most recent alarms, starting from the latest one.

  1. While an alarm is displayed, press the [SET] key to move to the lower level.
     The latest alarm is displayed.
  2. Press the [↓] key.
     The second latest alarm is displayed.
  3. Every time the [↓] key is pressed, the next older alarm will be displayed. Use the [↑][↓] keys to select the alarm record you want to check.

- **How to clear all alarm records**

  You can clear all alarm records at once.

  1. While an alarm is displayed, press the [SET] key to move to the lower level.
  2. Press the [↑] key three times and select the alarm record clear screen.
  3. Press the [SET] key.

  All alarm records are cleared.
Monitor mode

Warning

When a warning generates, a corresponding warning code will be displayed. You can also check or clear warning records.

Present warning: [W]

Warning record 1 (latest): [W]

Warning record 2: [W]

Warning record 10 (oldest): [W]

Clear warning records: [W]

Warning records are being cleared (blinking display)

* If operations are limited by the edit lock function, the screen text in gray is not shown.

Note

- Do not turn off the motor power while warning records are being cleared (=while the display is blinking). Doing so may damage the data.
- If operations are limited by the edit lock function, the warning records cannot be cleared.
- You can also clear the warning records by turning off the motor power.

- How to check a warning record

You can check up to ten most recent warnings, starting from the latest one.

1. While a warning is displayed, press the [SET] key to move to the lower level.
   The latest warning is displayed.
2. Press the [↓] key.
   The second latest warning is displayed.
3. Every time the [↓] key is pressed, the next older warning will be displayed. Use the [↑] [↓] keys to select the warning record you want to check.

- How to clear all warning records

You can clear all warning records at once.

1. While a warning is displayed, press the [SET] key to move to the lower level.
2. Press the [↑] key and select the warning record clear screen.
3. Press the [SET] key.
   All warning records are cleared.
Monitor mode

■ Direct I/O monitor

You can check the ON/OFF status of each I/O signal of the motor.

Each digit on the 7-segment LED display corresponds to a signal. If the signal is ON, the corresponding digit is lit. If the signal is OFF, the digit is unlit.

- Input monitor
- Output monitor
Data mode

Up to 64 sets of motor operation data can be set. Once set, the operation data is stored in the motor. The data will not be lost even after the OPX-2A is disconnected from the motor.
Before setting operation data, read the USER MANUAL carefully to understand the basic operations, functions and other details of the motor.

- Operation data has significant bearing on motor operation. Before setting any operation data, make sure you fully understand the content of the operation data.
- If operations are limited by the edit lock function or the HMI input is in an OFF state, the operation data cannot be edited.
- Operation data can also be set by selecting the ID with the parameter mode.
- If the [SET] key is pressed while executing the internal processing via RS-485 communication, “mEm-bUSy” may be displayed. Check “5 Screen transitions” on p.10 when “mEm-bUSy” is displayed. Be sure to wait until all internal processing is completed, before pressing the [SET] key.

7-1 Operation in the data mode

1. Use the [MODE] key to select the data mode.
2. Press the [SET] key on the top screen of the data mode.
3. Use the [↑][↓] keys to select a desired operation data number.
4. Press the [SET] key.
The display changes to the operation data screen.
5. Use the [SET] key to select the operation data item you want to set.
6. When pressing the [SET] key on the last operation data item, the display returns to the operation data No. screen.

* If operations are limited by the edit lock function, the screen text in gray is not shown.

*This item is effective when the “acceleration (deceleration) rate type” parameter [ID: 326] is set to “separate.” If this parameter is set to “common,” the values of the “common acceleration rate” [ID: 320] and “common deceleration rate” [ID: 321] parameters will be used. (Initial value: Separate)*

### How to set the dwell time

When displaying the “Link2” on the “operating mode” and pressing the [SET] key, the screen to set the dwell time is displayed. Input the dwell time using the [↑][↓][←][→] keys and press the [SET] key.

![Diagram](image_url)
7-3  Setting example

This section explains how to change the positioning mode and position of the operation data No.0.

- Positioning mode: Changes from incremental mode to absolute mode.
- Position: Changes from 0 step to 10000 steps.

1. Use the [MODE] key to select the data mode.
   The “DATA” LED is lit.

2. Press the [SET] key on the top screen of the data mode.
   The display changes to the operation data No.0 screen.

3. Press the [SET] key.
   The display changes to the positioning mode screen.

4. Press the [SET] key again.
   The present set value of the positioning mode is displayed with blinking.

5. Press the [↓] key once to select "1."

6. Press the [SET] key.
   The blinking speed of the input value becomes quickly and the value is set.
   The display returns to the positioning mode screen.

7. Press the [↓] key.
   The display changes to the position screen.

8. Press the [SET] key.
   The present set value of the position is displayed with blinking.

9. Use the [↑][↓][←][→] keys to select “10000.”
   The selected digit is displayed with blinking.

    The blinking speed of the input value becomes quickly and the value is set.
    The display returns to the position screen.

    The display returns to the operation data No.0 screen.
### 7-4 Initialization of the selected operation data

All of the set value for the selected operation data number can be restored to the initial values.

1. Use the [MODE] key to select the data mode.  
   The “DATA” LED is lit.

2. Press the [SET] key on the top screen of the data mode.  
   The display changes to the operation data No.0 screen.

3. Press the [SET] key.  
   The display changes to the positioning mode screen.

4. Press the [↑] key once.  
   The display changes to the clear data screen.

5. Press the [SET] key.  
   The display changes to the screen to execute clearing.

6. Press the [SET] key.  
   The display blinks and the operation data No.0 is cleared.

**Note**  
If operations are limited by the edit lock function, the initialization cannot be performed.

### 7-5 Initialization of all operation data

The operation data saved in the motor can be restored to the initial values.

For details, refer to the screen transition of the copy mode on p.14 or “10-6 Initializing motor data” on p.40.
8 Parameter mode

You can set parameters relating to motor operation and control. These parameters are saved in the motor. Before setting parameters, read the “PKA Series USER MANUAL” carefully to understand the basic operations, functions and other details of the motor.

Note
- Parameters have significant bearing on motor operation. Before setting any parameter, make sure you fully understand the content of the parameter.
- If operations are limited by the edit lock function or the HMI input is in an OFF state, the parameters cannot be edited.
- If the value you have input is outside the setting range, “Error” will be displayed for 1 second. If this error display appears, input a different value that falls within the setting range.
- If the [SET] key is pressed while executing the internal processing via RS-485 communication, “mEm-bUSy” may be displayed. Check “5 Screen transitions” on p.10 when “mEm-bUSy” is displayed. Be sure to wait until all internal processing is completed, before pressing the [SET] key.
- If a non-existent parameter ID is entered, “id-Error” will be displayed for 1 second. Check the ID and enter the correct one.

Timing for the setting value to become effective
When a parameter is changed, the timing for the new value to become effective varies depending on the parameters, which are the following three types.
- Effective immediately
  - Executes the recalculation and setup immediately when writing the parameter.
- Effective after stopping the operation
  - Executes the recalculation and setup after stopping the operation.
- Effective after turning the power ON again
  - Executes the recalculation and setup after turning the power ON again.

8-1 Operation in the parameter mode

1. Use the [ MODE ] key to select the parameter mode.
2. Press the [SET] key on the top screen of the parameter mode.
3. Use the [↑][↓][←][→] keys to enter the parameter ID.
4. Press the [SET] key.
   - The display changes to the parameter setting screen.
5. Use the [↑][↓][←][→] keys to enter the value.
8-2 Setting example

Pressing [SET] on the parameter selection screen enables to set parameters. The setting method of the parameter is explained here.

Example: When setting the electronic gear A (ID: 448) to “10”

1. Use the [MODE] key to select the parameter mode. The “PAR” LED is lit.

2. Press the [SET] key. The display changes to the parameter selection screen.

3. Use the [↑][↓][←][→] keys to enter "0448".

4. Press the [SET] key. The display changes to the parameter selection screen.

5. Use the [↑][↓][←][→] keys to enter "10".

6. Press the [SET] key again. The input value is set, and the display returns to the parameter selection screen.
There is a unique ID in each parameter. With the **OPX-2A**, set the parameter by selecting the ID.

### Operation data

Operation data can also be set by selecting the data mode.

<table>

**8-4 Initializing parameters**

The parameters saved in the motor can be restored to the initial values. Perform “Initialize parameters” of the copy mode. For the operation, check the screen transitions of the copy mode on p.14, or “10-6 Initializing motor data” on p.40.
9  Test mode

9-1  Overview of the test mode

- **Direct I/O test**
  The ON/OFF status of each input signal of the motor can be checked. Also, the ON/OFF status of each output signal can be switched on the OPX-2A. Perform a direct I/O test function when checking the connection status of the motor.

- **JOG operation**
  The motor can be operated using the keys on the OPX-2A.

- **Data select operation**
  Positioning operation can be performed.

- **Return-to-home operation**
  Return-to-home operation can be performed.

- **Position preset**
  The command position can be set to the preset position value.

- **Teaching**
  The motor can be operated using the keys on the OPX-2A, and the attained position can be applied to the operation data.

---

**Note**

- Stop the motor operation before changing to the test mode.
- When you move from the top screen of the test mode to a lower level, the following inputs will be disabled. START, SSTART, HOME, ±JOG, FWD, RVS and M50 to M55.
- In the direct I/O test, if the screen moves to the lower level, all of I/O signals and operation will be disabled.
- If the [SET] key is pressed while executing the internal processing via RS-485 communication, “mEm-bUSy” may be displayed. Check “5 Screen transitions” on p.10 when “mEm-bUSy” is displayed. Be sure to wait until all internal processing is completed, before pressing the [SET] key.
- If “Error” is displayed when data select operation, return-to-home operation, position preset or teaching function is performed, check whether an alarm generates.
- If operations are limited by the edit lock function, the position preset and teaching function cannot be executed.
- If the HMI input is in an OFF state, test mode cannot be executed.
9-2 Operation in the test mode

1. Use the [MODE] key to select the test mode.
2. Press the [SET] key in the top screen of the test mode. The display changes to the test mode item screen.
3. Use the [▲][▼] keys to select the item you want to perform.

- Direct I/O test
- Data select operation
- Return-to-home operation
- Position preset
- Teaching

* If operations are limited by the edit lock function, the screen text in gray is not shown.

- What happens when the [SET] key is pressed while the motor is operating

The test mode cannot be executed while operating. If the [SET] key is pressed on the selection screen of each item, the screen will not move to the lower level and "oPE-Err" will be displayed. Be sure to stop the motor operation before pressing the [SET] key.

9-3 Direct I/O test

When checking the connection condition of the motor, perform the direct I/O test.
Each digit on the 7-segment LED display corresponds to a signal. The LED is lit when the input signal is ON, and it is unlit when the input signal is OFF. Use the [↑] or [↓] keys to switch the ON-OFF state of the output signal. ‘0’ is displayed when the signal is ON, while ‘’ is displayed when the signal is OFF.

*Input test*  
![Input test](image)

*Output test*  
![Output test](image)

Use [→] to navigate through the digits. Use [↑] or [↓] to switch the ON/OFF status. [0] indicates the ON status. [ ] indicates the OFF status.

---

## 9-4 JOG operation

The motor can be operated using the keys on the **OPX-2A**.

### Top screen of JOG operation

[Image]

Pressing the [↑] key once causes the motor to rotate one step in the positive direction. Pressing and holding the key cause the motor to rotate continuously in the positive direction. Pressing the [↓] key once causes the motor to rotate one step in the negative direction. Pressing and holding the key cause the motor to rotate continuously in the negative direction.

The operating speed corresponds to the value set in the “JOG operating speed” parameter [ID: 323]. Take note that when the value set in the “JOG starting speed” parameter [ID: 325] is greater than the value set in the “JOG operating speed” parameter [ID: 323], the Jog starting speed will become effective.

### Speed

![Speed diagram](image)

**VS**: JOG starting speed (ID:325)  
**VR**: JOG operating speed (ID:323)  
**TR**: JOG acceleration/deceleration rate (ID:324)

---

**Note**  
During JOG operation, the motor rotates at the specified operating speed while each applicable key is pressed. Before executing JOG operation, consider the status of the equipment and condition of its surroundings to confirm thoroughly that motor rotation will not cause any dangerous situation.
9-5 Data select operation

Selecting a desired operation data number and pressing the [SET] key will cause positioning operation to perform.

Note: The motor rotates at the set operating speed in positioning operation. Before executing positioning operation, consider the status of the equipment and condition of its surroundings to confirm thoroughly that motor rotation will not cause any dangerous situation.

9-6 Return-to-home operation

Return-to-home operation can be performed. The operating speed corresponds to the value set in the "operating speed of home-seeking" parameter [ID: 353].

Note: The motor rotates at the set operating speed in return-to-home operation. Before executing return-to-home operation, consider the status of the equipment and condition of its surroundings to confirm thoroughly that motor rotation will not cause any dangerous situation.

9-7 Presetting the position

In this operation, the command position is preset by rewriting the value in the "preset position" parameter [ID: 454].

Note: If operations are limited by the edit lock function, the preset function cannot be performed.
9-8 Teaching

The motor can be operated using the keys on the OPX-2A, and the attained position can be applied to the operation data.

The absolute mode will be automatically selected as the operation mode of any position data set by teaching.

The operating speed, acceleration/deceleration rate and starting speed of teaching are the same as the corresponding settings applicable to JOG operation.

Note

- The motor rotates at the set operating speed in teaching function. Before executing teaching function, consider the status of the equipment and condition of its surroundings to confirm thoroughly that motor rotation will not cause any dangerous situation.
- If operations are limited by the edit lock function, the teaching cannot be performed.
10 Copy mode

The OPX-2A has four data banks, and operation data and parameters can be saved in each of these data banks. Since non-volatile memory is used as the data memory element, stored data will be retained even after the power is turned off.

10-1 Overview of the copy mode

- **Download**
  Copy data saved in the OPX-2A to the motor.

- **Upload**
  Copy data saved in the motor to the OPX-2A.

- **Verification**
  Verify data in the OPX-2A against the corresponding data in the motor.

- **Initializing motor data**
  Restore data saved in the motor to the initial values.

**Note**
- Stop the motor operation before changing to the copy mode.
- When moving from the top screen of the copy mode to the lower level, the following inputs will be disabled. START, SSTART, HOME, ±JOG, FWD, RVS and MS0 to MS5.
- If the [SET] key is pressed while executing the internal processing via RS-485 communication, ‘mEm-bUSy’ may be displayed. Check “5 Screen transitions” on p.10 when ‘mEm-bUSy’ is displayed. Be sure to wait until all internal processing is completed, before pressing the [SET] key.
- If operations are limited by the edit lock function, copy mode cannot be operated.
- If the HMI input is in an OFF state, download and initialization cannot be executed.

## Error of the copy mode
If an error occurs in download or verification, the error code will blink on the display. The processing will not be executed and the display will return to the top screen of each processing.

<table>
<thead>
<tr>
<th>Blanking display</th>
<th>Description</th>
<th>Action</th>
</tr>
</thead>
</table>
| **Prod - Err**    | There is a discrepancy between the data in the OPX-2A and the data in the motor. | • Check the product.  
• Check the data bank number on the OPX-2A. |
| **HErrd - Err**   | An error occurred while processing the data. | Perform download again. If the same error occurs, the data saved in the OPX-2A may be damaged. Upload the applicable data to set the OPX-2A data again. |
| **bcc - Err**     | The specified data bank number does not contain data. | Check the data bank number. |

**Note**
- If an error occurs while initializing motor data, the error code ‘n - dErr’ will blink on the display. Perform download again. If the same error occurs, the data saved in the OPX-2A may be damaged. Upload the applicable data to set the OPX-2A data again.

**Note**
- If an error occurs when performing download, the error code ‘dErr’ will blink on the display. Perform download again. If the same error occurs, the data saved in the OPX-2A may be damaged. Upload the applicable data to set the OPX-2A data again.

**Note**
- If an error occurs while performing upload, the error code ‘uErr’ will blink on the display. Perform upload again. If the same error occurs, the data saved in the motor may be damaged. Download the applicable data to set the motor data again.
10-2 Operation in the copy mode

1. Use the [MODE] key to select the copy mode.
2. Press the [SET] key in the top screen of the copy mode. The display changes to the copy mode item screen.
3. Use the [↑][↓] keys to select the item you want to perform.

- What happens when the [SET] key is pressed while the motor is operating
  Downloading and initialization cannot be executed during operation. Pressing the [SET] key will generate an error, and “oPE-Err” will be shown. Be sure to stop the motor operation before pressing the [SET] key.

- What happens when the [SET] key is pressed while the edit lock is enabled
  While the edit lock is enabled, you cannot move to any lower level from the top screen of the copy mode. Pressing the [SET] key will generate an error, and “LocK-Err” will be shown. Be sure to cancel the edit lock before pressing the [SET] key. Refer to “3-6 Edit lock function” on p.7 for the procedure to cancel the edit lock.

10-3 Downloading to the motor

In this operation, data in the specified data bank number are downloaded to the motor.

If a download error occurs, a code indicating the nature of the error will blink on the display. Download will not be performed and the display will return to the top screen of download. Refer to p.37 for details.

- Some parameters will become effective after cycling the power. When these parameters were changed by downloading, cycle the motor power.
- Do not turn off the motor power while the download is still in progress (=while the display is blinking). Doing so may damage the data.
10-4 Uploading to the OPX-2A

In this operation, data saved in the motor is uploaded to the specified data bank number.

Note
Do not turn off the motor power while the upload is still in progress (=while the display is blinking). Doing so may damage the data.

10-5 Verifying data

In this operation, data in the specified data bank number are verified against the corresponding data saved in the motor. If the verification finds that the two sets of data match, “Good” will be shown. If the two do not match, “Error” will be shown.

If a verification error occurs, a code indicating the nature of the error will blink on the display. Verification will not be performed and the display will return to the top screen of verification. Refer to p.37 for details.
10-6 Initializing motor data

In this operation, data saved in the motor are restored to their initial values.

**Note**

- Some parameters will become effective after cycling the power. When these parameters were changed by initialization, cycle the motor power.
- Do not turn off the motor power while the initialization is still in progress (= while the display is blinking). Doing so may damage the data.
