This manual describes the MEXE02 version 4 and later. The screens and operation procedures in the MEXE02 version 4 and later differ from those in versions earlier than the MEXE02 version 4. Please contact your nearest Oriental Motor sales office for further information.

This manual describes product handling procedures and safety precautions.
• Please read it thoroughly to ensure safe operation.
• Always keep the manual where it is readily available.
1 Introduction

- **Before use**
  Perform any installation, uninstallation, editing, and other operations for the support software MEXE02 using an account with Administrator privileges. Use the MEXE02 correctly and safely after thoroughly reading the manual and understanding the basic operating procedures and other details.

- **Products for possible combinations**
  For the products that can be combined with MEXE02 version 4, check on the Oriental Motor Website. A product that can be combined with the MEXE02 is described as "applicable product" here.

- **Notation rules**
  This operating manual describes using screens displayed under the following conditions.
  Type of Operating System: Windows 10
  Product type: AZ Series EtherNet/IP Compatible Driver

- **Functions of MEXE02**
  The MEXE02 is a software that supports all aspects of the equipment from starting-up to maintenance. Editing the operation data and parameters, test operation of a motor, and a variety of monitors can be performed.

  Functions, setting items, screens and others vary depending on the applicable product combined with the MEXE02.

- **Installation and uninstallation of MEXE02**
  For the installation and uninstallation of the MEXE02, refer to Oriental Motor Website or the separate manual Support software MEXE02 INSTALLATION MANUAL.

- **Communication cable**
  Connect a PC and an applicable product using a commercially available USB cable. For specifications of the USB cable that can be used, refer to the user manual or operating manual of the applicable product.

- **Operating environment**

<table>
<thead>
<tr>
<th>OS</th>
<th>The following operating systems are compatible only with the 32-bit (x86) version and 64-bit (x64) version.</th>

</table>
  | Recommended memory *3 | 32-bit (x86) version: 2 GB or more  
 64-bit (x64) version: 2 GB or more |
  | Hard disk capacity *4 | Available disk space of 1 GB or more                                                            |
  | USB port            | One USB 2.0 Port                                                                                |

  *1 The Windows 8.1 Update (KB2919355) must be applied.
  *2 The update program (KB2670838) must be applied or the Internet Explorer 11 must be installed.
  *3 The hardware requirements for the OS must be satisfied.
  *4 Microsoft .NET Framework 4.6.2 must be installed in your PC so that the MEXE02 version 4 may function. Microsoft .NET Framework 4.6.2 will be installed automatically, if not already installed. The following disk space may require additionally.
  32-bit (x86) version: 4.5 GB  
  64-bit (x64) version: 4.5 GB

- **RoHS Directive**
  The products do not contain the substances exceeding the restriction values of RoHS Directive (2011/65/EU).
2 Safety precautions

The MEXE02 is designed on the assumption that the user has an understanding of basic operations such as starting up and exiting applications in Windows and how to use a mouse. Use the product only after carefully reading and fully understanding these instructions. Also read the “Safety precautions” section in the user manual or operating manual of the applicable product to be used in combination with the MEXE02.

**WARNING**

Handling the product without observing the instructions that accompany a “WARNING” symbol may result in serious injury or death.

**Connection**

- Turn off the power to both the PC and applicable product before connecting your PC to the applicable product. Failure to follow this instruction may cause electric shock.

**CAUTION**

Handling the product without observing the instructions that accompany a “CAUTION” symbol may result in injury or property damage.

**Connection**

- The USB communication connector of the applicable product is not insulated. When grounding the positive terminal of the power supply, do not connect any equipment (PC, etc.) whose negative terminal is grounded. Doing so may cause the equipment and applicable product to short, damaging both. Do not ground the equipment if you plan to connect it.

**Disposal**

- Dispose the product correctly in accordance with laws and regulations, or instructions of local governments.
**3 Basic operation**

- **Configuration of MEXE02 screens**

  - Main window: Displays panes for “Parameter” and “Monitor.”
  - Subarea: Displays the navigation pane, the parameter information pane, and others.

- **Hide or show the subarea**

  Moving the cursor to the border of areas appears a button to switch between hiding and showing.

* The subarea 3 is not displayed if you create a new data file using the “Select a product” icon shown in the window when the MEXE02 is started.
**Basic operations of window**

Floating: Separates a pane from the main window to display it.

Docking: Moves a pane to another area, or places multiple panes side by side in one area.

- **Floating**

  Grasp the tab and drag the pane out of the area.

  **To return the floating**

  Double-clicking the title bar restores the separated pane to the area before the floating.
Basic operation

Docking

- Panes in the main area cannot be docked to the subarea.
  You can arrange them side by side in the main area.
- Panes in the subarea cannot be docked to the main area.
  You can dock them between subareas or arrange them side by side in the subarea.

If you grasp the tab and drag the pane to another area, a guide diamond appears.

How to use a guide diamond is common to the main area and the subarea.
If there is only one pane in the area, only “Position to entire area” will be displayed.

Dropping the pane based on the guide diamond will dock it to the specified position.

The moved pane is arranged in the subarea.
To arrange panes side by side in the same area

If multiple panes are opened in the same area, they are arranged to overlap. When arranging these panes side by side, grasp the tab and drag in the same area. As a guide diamond appears when dragged, dropping the pane based on the guide diamond will dock it to the specified position.

The pane of base settings parameter is hidden.
Open the data file

4 Open the data file

When the MEXE02 is started, the following window appears.

- Open an existing data file.
- Select an applicable product to create a data file.

Create a new data file for an applicable product connected.

Update the connection information.

Read the data file from an applicable product connected.

Click to open a new main window.

Search a file in a PC.

Select an applicable product to create a new data file.

Create a new data file for an applicable product previously used.
5 How to use the screen

Screens, functions, setting items and others vary depending on the applicable product.

---

1 Menu bar
2 Toolbar
3 Currently open window
4 Parameter
5 Monitor

### Menu bar

This includes commonly used PC-operations (open, overwrite save, print, etc.) and the MEXE02 specific operations. This section describes operations specific to the MEXE02.

#### File menu

- **Export**
  - Save the data in CSV format. Data saved in the CSV format can be edited in applications other than the MEXE02. However, data files in the CSV format cannot be opened in the MEXE02.
- **Import communication data**
  - Read the monitor content from the saved file.

* This is a function that can offline check the monitor content having been executed when a file was saved (excluding the waveform monitor).

#### Edit menu

- **Initialize**
  - Restore the editing data to the default.
# How to use the screen

**View menu**
- Open the **AZ Series Function Edition**
- Open the **OPERATING MANUAL AZ Series Function Edition**.

**Communication menu**
- **Reset**
  Reset the data saved in the non-volatile memory of the applicable product to the factory default settings.

**Support menu**
You can use beneficial tools, such as links to videos on our Website.

---

## Toolbar

| ![Selects an applicable product to create a new file.](image) | Selects an applicable product. |
| ![Selects an existing data file to open it.](image) | Updates the connection status. |
| ![Saves the present data over the existing data.](image) | Switches start-stop of the monitor. |
| ![Copies the data.](image) | Reads the data saved in an applicable product to the **MEXE02**. |
| ![Pastes the data.](image) | Writes the data created in the **MEXE02** to an applicable product. |
| ![Undoes the operation.](image) | Verifies the data saved in an applicable product with the data displayed on the **MEXE02**. |
| ![Redoes the operation that has undone.](image) | You can change the language that is displayed by the **MEXE02**. |
### Monitor

Examples for how to use the monitor are shown below. The functions presented here are excerpts.

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>

</tr>
</tbody>
</table>
This chapter explains how to edit data and write it to an applicable product, and how to perform test operation.

### 6-1 Editing and writing data

- **Note**
  - Just changing the data in the **MEX02** will not cause the data in the applicable product to change. To change the data in the applicable product, writing data must be performed.
  - Do not turn off the power of the applicable product while writing data. Doing so may destroy the data.

- **memo** You cannot edit the data while executing the monitor. Switch from **ON** to **OFF** in the toolbar to stop the monitor before editing the data.

1. Edit the data.

   When the value is changed, the color of the cell changes to yellow.

   Selecting a value from a pull-down menu:
   Double-click a cell.

   Restoring the changed value to the default:
   Select the cell and click the right mouse button, and click [Initialize].

   Only the letter color of the cell that was restored to the initial value changes to blue.

2. Write the data to the applicable product with ➔ in the toolbar.
**Warning function when writing data**

This function can be used only for the applicable product that a desired name (user name) can be set to the motor or driver.

When writing the **MEXE02** data to the applicable product, setting the user name can prevent from overwriting the data to a wrong applicable product.

1. Set desired names to "Motor user name" and "Driver user name" in the parameter.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Motor user name</td>
</tr>
<tr>
<td>2</td>
<td>Driver user name</td>
</tr>
<tr>
<td>3</td>
<td>Driver simulation mode</td>
</tr>
<tr>
<td>4</td>
<td>Main power mode</td>
</tr>
<tr>
<td>5</td>
<td>Base current[X]</td>
</tr>
<tr>
<td>6</td>
<td>Stop current[X]</td>
</tr>
</tbody>
</table>

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1st</td>
</tr>
<tr>
<td></td>
<td>2nd</td>
</tr>
</tbody>
</table>

2. Click [Option] from the [Tool] menu.

3. Select the user name to be compared.

When writing data, if the user name is not same between the **MEXE02** and applicable product, the message is displayed. Check the applicable product.
6-2 Test operation

Test operation of the motor can be performed using only the MEXE02 before connecting a host controller. (Remote operation)
The result having obtained by test operation can be applied to the data depending on an applicable product.
(Teaching, remote operation)
This section describes using the pane of teaching, remote operation of the AZ Series EtherNet/IP compatible driver.

Memo The I/O test cannot be executed during test operation.

1. Click [Teaching, remote operation] in the monitor.
2. Click “Teaching, remote operation.”

3. Use buttons on the pane to operate the motor.

   Set the position information to the operation data.
   Select the operation data number.
   Write the teaching data to the applicable product.

* When [Not set] is selected, the operation mode set in the operation data is used.

4. To end the test operation, unselect “Teaching, remote operation.”
   It can also end the test operation by switching from to in the toolbar.

Note Just clicking [Position set] will not cause to write to the applicable product. To write to the applicable product, execute [Reflecting on the driver.].
I/O test

I/O signals of direct I/O and remote I/O can be tested. This function is convenient if you want to check the wire connection of physical I/O with the host controller and the operation of network I/O.

In I/O test, you can forcibly turn on or off output signals. Consequently, other equipment connected to an applicable product may operate. Check the surrounding circumstances to ensure safety before conducting this procedure.

**Memo:** The I/O test cannot be executed during test operation.

1. Click [I/O test] in the monitor.
2. Click "I/O test mode."
3. Switch the ON-OFF status of input signals from the host controller. The check box of the corresponding input signal is changed.
4. When switching the ON-OFF status of output signals, click the check box of corresponding output signals.
5. To end the I/O test, unselect "I/O test mode."
7 How to use waveform monitor

The motor speeds and I/O signals status can be checked in waveforms.

7-1 How to read the screen

Click [Waveform monitor] in the monitor.

1 Measurement results are drawn in this area. CH1 to CH4: Measure a state of the applicable product CH5 to CH12: Measure the I/O signals

2 Sets a trigger.

3 Starts measurement.

4 Stops measurement.

5 Sets the measurement time range (width).

6 Sets the display method for CH5 to CH12.
   • Scale: Display size
   • Signal name: The signal name can be shown or hidden.

7 Sets the measurement conditions for each CH.

8 Switches between hiding and showing for the measurement line. Also, the CH to be measured can be selected.

9 Copies the presently displayed waveform to the clipboard.

10 Saves the presently displayed waveform to an external file.*

11 Loads the saved setting from "Favorites data."

12 The setting for measurement can be saved as "Favorites data."

* To save it, switch from ON to OFF in the toolbar to stop the measurement.
### Setting the measurement conditions

Use the pane displayed by clicking ![Setting](image) to set the measurement condition of each CH.

1. Switches between hiding and showing for each CH.
2. Shows inversely the waveform of the signal measured.
3. Moves the display position of a waveform up or down.
4. Selects the item to be measured.
5. Selects a display scale for CH1 to CH4. Using this setting in combination with can zoom in.
6. Sets the offset value to be added to the display scale of CH1 to CH4. Using this setting in combination with can zoom in.

### Setting the trigger

Setting a trigger to CH can check the waveforms when a certain condition is established, such as the motor speed or the ON-OFF status of signals.

1. Trigger level of CH1 to CH4
   The detection condition of a trigger can be set in combination with .
2. CH to set a trigger (available only for the CH that is displayed)
3. Trigger type
   Refer to “Trigger type” on p.18 for details.
4. Trigger detection position

#### Trigger detection condition

- **▲**: In the case of setting CH1 to CH4 as a trigger, when the measured value changes from being less than the LEVEL value to being the LEVEL value or more.
  In the case of CH5 to CH12 as a trigger, when the signal changes from OFF to ON.

- **▼**: In the case of setting CH1 to CH4 as a trigger, when the measured value changes from being the LEVEL value or more to being less than the LEVEL value.
  In the case of CH5 to CH12 as a trigger, when the signal changes from ON to OFF.

- **▲▼**: This item sets both ▲ and ▼ as conditions.
How to use waveform monitor

**Trigger type**

<table>
<thead>
<tr>
<th>Trigger Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto</td>
<td>Waveforms are updated until the waveform measurement is stopped.</td>
</tr>
<tr>
<td>Normal</td>
<td>Waveforms are updated every time a trigger is detected. The trigger can be detected immediately after the measurement of waveforms is started.</td>
</tr>
<tr>
<td>Single</td>
<td>Waveforms are updated when a trigger is detected, after which waveform monitor will stop. The trigger can be detected immediately after the measurement of waveforms is started.</td>
</tr>
<tr>
<td>Normal (Pre)</td>
<td>Waveforms are updated every time a trigger is detected. Waveforms before the trigger is detected (left side of the trigger detection position) can also be checked. However, the trigger is not detected until a certain period of time (*) elapses after the measurement is started.</td>
</tr>
<tr>
<td>Single (Pre)</td>
<td>Waveforms are updated when a trigger is detected, after which waveform monitor will stop. Waveforms before the trigger is detected (left side of the trigger detection position) can also be checked. However, the trigger is not detected until a certain period of time (*) elapses after the measurement is started.</td>
</tr>
</tbody>
</table>

---

• When checking the waveforms before and after a trigger is detected, select Normal (Pre) or Single (Pre).
• When checking only the waveforms after a trigger is detected, select Normal or Single. Waveforms before a trigger is detected are displayed even when Normal or Single is selected. However, if the time from when the measurement is started until when a trigger is detected is less than a certain period of time (*), the old waveforms before the measurement is started may be mixed.

* Time set in Timescale × 10

---

### 7-2 Zooming in on waveform data

You can enlarge and display part of the measured waveform data.

The following shows an example of zooming in on around the peak value after measuring the feedback speed of CH1.

1. Select “CH1” in "Measure," and select the ΔV check box. Two lines (blue, red) for measuring ΔV are displayed.

2. Align the red measurement line with the CH1 display position.

3. Click to start measurement.
4. Align the blue measurement line with the peak value of CH1 and read the value of $\Delta V$. The result shows the peak value of CH1 at around 350 r/min.

5. Click .

6. In "Offset" of CH1, enter a center value onto which you want to zoom in. In this example, enter 350 (r/min), the measurement result of Step 4 to zoom in on around the peak value.

7. In "Scale" of CH1, set the speed for each scale on the vertical axis. In this example, enter 100 (r/min/div). The waveform is zoomed in, centering on the value entered as the offset value.
